

A Study of Multiple Intelligence of the Students of Secondary Schools in the Context of Parenting Style

Researcher

PARUL R. GOSWAMI

Guide

Dr. JIGNESH B. PATEL

Major Findings of the Study

The main goal of any research is to generalize some principles based on statistical analysis. In present study, the researcher studied the multiple intelligence of the students of standard 9 in the context of parenting style.

The major finding obtained by statistical analysis are as follows.

The main goal of any research is to generalize some principles based on statistical analysis. In present study, the researcher studied the multiple intelligence of the students of standard 9 in the context of parenting style.

- The present study was very important to find out the relationship between parenting style and multiple intelligence.
- This research revealed that in Gujarat state of India, most of the parents of the students of standard 9 treat their kids with either authoritarian parenting style or authoritative parenting style.
- It was found that there were very few students who were treated with indulgent or uninvolved parenting style.
- This research would also help the parents in choosing the appropriate parenting style to improve their kid's intelligence.
- Most of the parents emphasize on linguistic and mathematical intelligence but other types of intelligence are also very important in the development of their kids.
- The parents should understand this phenomenon of multiple intelligence and hoped they emphasize on all types of intelligence in equal manner.
