

# **Effectiveness of A Programme for Enhancing Social Intelligence in Students of Class XI**

Researcher

**RAJSHREE L. TANDEL**

Guide

**Dr. JIGNESH B. PATEL**

## **Major Findings of the Study**

- The average of the experimental group was higher than that of the control group and the value was also significant, hence the programme was found to be successful.
- It can be said that if the social intelligence of the students is to be enhanced then the traditional method should be replaced by the process of teaching in an experimental way.
- The effect of the Social Intelligence Enhancement Programme (SIEP) was more on the students with high IQ in rural areas than the students with medium and low IQ.
- To increase the socialization of students with medium and low IQ, such activities should be promoted.
- Students' social intelligence can be enhanced through this Social Intelligence Enhancement Programme (SIEP) in rural and urban areas and this programme has proved to be highly effective.
- To give traction to this effort it is recommended that due deliberations be held to incorporate such a programme in the curriculum of every student in Gujarat and India.
- The programme inspires the students to be a good human being with values and morals thereby paving their way to become a good and successful human being.
- There should be some activities in the textbooks regarding social behavior and intelligence.
