

## **About 7.1.4.**

### **Rain water management:**

There is no separate provision for appropriate rainwater harvesting. But in this regard, the water is disposed in the right direction in the monsoon to give it the right direction. Since the soil is sandy, it absorbs water.

### **About billing:**

As this process is done by human resource (labourers) in monsoons, there is no need to incur any cost.

### **About tanks and Construction of tanks and bund:**

We have an overhead tank and Bore well in our campus for 24 hours' water facility. For water, Construction of tanks and bunds are also at our campus area for water conservation. All tanks are cleaned regularly. It takes into account the required chlorine and the parameters of purification.

**Waste water recycling:** This arrangement is not yet in place.

- **This building is running in an old government school. Separate construction is not allowed.**
- **Enclosed is a letter to that effect.**
